SIDUN / PRODUCT INFORMATION SHEET

SIDUN 101 Neutral Silicone Weatherseal

Catalogue SKU: SIDUN-101 | Version 1.0 | English | 21 November 2026

SIDUN 101 is a neutral-cure silicone weatherseal for perimeter joints in windows, doors and compatible glazing. Start with the joint detail and expected movement when selecting it for an exposed assembly.

Key features

Neutral-cure silicone • Perimeter weatherseal for windows and doors • Cartridge-applied bead

Typical applications

Exterior window frame-to-wall joints • Exterior door frame perimeters • Compatible glass-to-frame weatherseals

Substrates and compatibility

Compare adhesion on the actual glass, aluminium finish and other side of the joint. Include any wall coating, primer, backer or gasket that will contact the sealant in the compatibility review.

Packaging

The 2025 catalogue lists 300 mL cartridges, 24 per carton. A separate archived label lists 335 g as net weight. Confirm the current cartridge label, colour and carton count for the order.

Application guidance

Prepare — confirm joint geometry, movement and backing, then clean each surface using a compatible method. Apply — place a continuous bead and tool it against both sides of the joint within the documented working time. Check — let the sample cure under representative conditions and inspect adhesion at both edges.

Planning a trial

Share the opening detail, frame finish, joint width and depth, backing material and outdoor exposure. Where the glazing detail transfers load, request a grade and assembly documentation for that function.

Technical data and safety information

Confirm joint movement, primer requirements and cure conditions in the data for the selected grade and finish.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
