SIDUN 101A Silicone Sealant — 120 mL Tube

Catalogue SKU: SIDUN-101A | Version 1.0 | English | 21 November 2026

SIDUN 101A is a one-component silicone sealant in a small squeeze tube for finishing short joints around compatible kitchen edges and window sills. The tube suits local touch-ups where the applicator needs to control a short bead.

Key features

One-component silicone • Small squeeze-tube format • White catalogue finish

Typical applications

Interior window-sill trim seams • Compatible kitchen edge details • Local finishing at trim returns

Substrates and compatibility

Test the actual sill or trim and the surface it meets. Check paint, laminate or glazed finishes separately, especially where an old sealant or cleaning product may still be present.

Packaging

The 2025 and 2026 catalogues list a white 120 mL tube and 25 tubes per carton. Confirm the label, colour and carton configuration for the order.

Application guidance

Prepare — clear loose residue from the short seam and mask the edges where a straight line matters. Apply — size the opening for the bead and tool the fresh sealant to contact both surfaces. Check — inspect the cured edge for adhesion, bead shape and colour against the trim.

Planning a trial

Choose 101A for a small finishing detail where a squeeze tube suits the work. Share the two surfaces, joint size and finish target before selecting it for a particular kitchen or sill.

Technical data and safety information

Confirm substrate compatibility, working time and cure conditions for the selected tube version.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
