SIDUN 103A Interior Wall Repair Paste

Catalogue SKU: SIDUN-103A | Version 1.0 | English | 21 November 2026

SIDUN 103A is a white interior wall repair paste for shallow surface defects such as nail holes, scratches and small chips. Compare a dried patch with the existing wall before planning the finish.

Key features

White paste • For local interior surface repairs • Squeeze-tube application with a scraper

Typical applications

Filling shallow nail holes in sound interior walls • Smoothing small surface scratches • Patching minor chips near interior door trim

Substrates and compatibility

Use a dry, sound wall surface. Remove loose paint, dust and powdering material, then test whether the patch follows the texture and colour of the surrounding wall.

Packaging

Matching packaging and catalogue records show a white paste in a 120 mL squeeze tube. Historical carton counts differ. Confirm the current label and carton quantity for an order.

Application guidance

Prepare — remove loose material and protect the floor and nearby finishes. Apply — fill the shallow defect and level it with a scraper. For a follow-up coat, let the first coat dry fully. Check — inspect the dry patch for level and texture. Confirm any sanding or topcoat step on the test area.

Planning a trial

Send a close-up of the defect and describe its depth, wall condition and target finish. Use 103A for a cosmetic patch on a stable surface, and assess any recurring crack or moisture source before patching.

Technical data and safety information

Confirm suitable coat depth, drying conditions and finish compatibility. Investigate dampness or recurring movement before repairing the surface.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
