SIDUN 7.0 Deck Fitting Perimeter Sealant

Catalogue SKU: SIDUN-7.0 | Version 1.0 | English | 21 November 2026

SIDUN 7.0 is intended for evaluation as an above-water perimeter seal around compatible deck fittings and surface-mounted hardware. The sample should reproduce the deck finish, fitting base and fastening layout.

Key features

Perimeter sealing around deck fitting footprints • Above-water application scope • Trial using the actual hardware and fastening layout

Typical applications

Above-water perimeter around a surface-mounted deck fitting • Seam along a compatible deck hardware base • Perimeter of a non-structural cover mounted above the waterline

Substrates and compatibility

Review the deck finish and material on the underside of the fitting. Include fastener locations, coating condition, joint access and exposure to spray and cleaning agents.

Packaging

A 300 mL SIDUN 7.0 cartridge is documented in the catalogue. Confirm the current cartridge, batch and case quantity with the quote.

Application guidance

Dry-fit the hardware, mark the perimeter and note fastening and drainage features. Trial the perimeter bead on a representative deck and fitting assembly following current instructions. After cure, inspect continuity around the base and verify the specified fastening remained correctly seated.

Planning a trial

Choose 7.0 for a perimeter bead at a fitting footprint when the fastening design is specified separately. For general above-water fit-out seams, compare SIDUN 5.0.

Technical data and safety information

Request current 7.0 documentation for above-water fitting perimeters. Verify requirements for immersion, structural load and any project approvals independently.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
