SIDUN / PRODUCT INFORMATION SHEET

SIDUN 700 Two-Component Tile Joint Filler

Catalogue SKU: SIDUN-700 | Version 1.0 | English | 21 November 2026

SIDUN 700 is a two-component filler for visible interior tile joints where the finish is part of the specification. The historical catalogue identifies a matte version. A cured board shows how the current sample reads next to the selected tile texture.

Key features

Two-component tile-joint format • Historical matte finish reference • Trial evaluation with the actual tile texture

Typical applications

Interior wall tile joints • Seams between compatible matte-finish tiles • Cross-joints in decorative interior tile layouts

Substrates and compatibility

Use the same tile grade, surface texture, edge profile and gap as the installation. Include an offcut or spare panel where an absorbent or textured surface may affect cleanup.

Packaging

Archived packaging and catalogue records show a 400 mL dual-component presentation. Confirm the current colour, finish, mixer and case quantity for the selected pack.

Application guidance

Make a small sample board with the intended tile face and joint intersection. Use the matched dispenser and mixer, then trial the cleanup method on the tile surface. Inspect the cured joint from normal viewing angles and under the intended lighting.

Planning a trial

Evaluate 700 when a matte-reference tile seam is wanted. Compare 700 and 600 on the same tile, with the same joint dimensions and lighting, to approve the finished appearance.

Technical data and safety information

Request current handling, tooling, cleanup and cure instructions. Establish suitability separately for movement joints, permanent immersion or other specialised conditions.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
