SIDUN 817 Polyurethane Bonding Adhesive

Catalogue SKU: SIDUN-817 | Version 1.0 | English | 21 November 2026

SIDUN 817 is a polyurethane bonding adhesive for compatible panels and components in workshop assembly and repair. Test the bond on the actual surfaces and with the fixture arrangement planned for the job.

Key features

Polyurethane adhesive • Cartridge-applied bond line • Catalogue use includes compatible panel bonding

Typical applications

Decorative panel bonding • Compatible skirting and trim attachment • Bonding compatible non-load-bearing components in workshop assembly

Substrates and compatibility

Check both sides of the bond, including the panel facing and the support finish. Evaluate whether the finish itself adheres securely and whether either material needs specific preparation.

Packaging

The 2025 and 2026 catalogues list 300 mL cartridges, 24 per carton, with a brown colour reference. Confirm the current grade, colour and pack when enquiring.

Application guidance

Prepare — fit the parts dry, confirm contact area and test cleaning on the actual finishes. Apply — place the adhesive and assemble the test pieces within the confirmed working time. Hold them in position as directed. Check — allow the bond to cure and examine the trial for slip, finish damage and adhesion before moving to production.

Planning a trial

Send both materials, the intended contact area, part orientation and service exposure. Share the required result for a sample trial, especially if the parts have painted or laminated finishes.

Technical data and safety information

Confirm assembly time, fixture-release conditions and the acceptance test for the actual bond before committing to a production cycle.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
