SIDUN CS23 Multipurpose Polyurethane Joint Sealant

Catalogue SKU: SIDUN-CS23-GENERAL | Version 1.0 | English | 21 November 2026

SIDUN CS23 General is a polyurethane sealant for evaluating non-structural building and fabrication joints. Its catalogue foil pack supports a trial using a compatible dispenser and the same joint geometry and finishes planned for installation.

Key features

General-use polyurethane joint sealant • Foil-pack catalogue presentation • Non-structural building and fabrication joint evaluation

Typical applications

Window or door opening perimeter joints • Transitions between compatible building panels • General non-structural fabrication seams

Substrates and compatibility

Provide the actual finishes on both sides of the joint. Coated metal, panel facings and mineral surfaces require trial adhesion on the specific grade and preparation. Include backing, joint movement and exposure.

Packaging

A 590 mL foil pack is documented for CS23 General. Confirm the exact general-use label, case configuration and colour with the quote.

Application guidance

Confirm the joint profile, substrate preparation and any primer or backing with the current instructions. Use a compatible foil-pack dispenser to apply a sample bead in the intended orientation. Review the cured bead, adhesion and finish under the specified service conditions.

Planning a trial

Name CS23 General in the enquiry and include your joint drawing, material finishes and expected movement. For a specialised root-resistant joint, request a separately identified variant and supporting documents.

Technical data and safety information

Use current CS23 General documents to assess joint movement and service conditions. Fire-rated, root-resistant, structural and underwater use require their own product and system evidence.

This sheet summarizes product identity and selection guidance. Request the applicable technical data sheet and safety data sheet for the selected model, packaging version and market. Confirm current packaging and availability before ordering.
